Chapter 1

Introduction

ACKNOWLEDGEMENT:

This Project is completed by the support from our honorable Teacher **Md. Rajibul Palas**. We are greatly indebted to our beloved teacher for her useful and necessary observation, suggestions and contribution. We could not have been able to achieve anything in this project without her supervision. May Allah enrich her greatly in every area of life.

Kowsar Ahmed Sojol

&

MD.Belal Hossen

Introduction

Assembly Language is a very important course for a student who studied the Computer Science and Engineering subject. In this course, we learned the concept of assembly language. At first, we learned the basic concept about assembly language. From the acquired knowledge of this course finally, we designed a Restaurant Management system. We have tried our best to make the complicated process of Restaurant Management System as simple as possible. We have tried to design the Project in such a way that user may not have any difficulty in using this package & further expansion is possible without much effort.

Objective

The main objective of this project is to establish an integrated Restaurant Management system. Specific Objective:

=> The program will show the foods names and pricings list. The program will calculate the total products values and quantities and will display it to the user. User can also reset the records of products. After completing the purchase user can exit the program

=> A computer based management system is designed to handle all the primary information required to calculate order number, order list, price and handle all the details required for the correct statement calculation and generation.

=> This project intends to introduce more user friendliness in the various activities such as take order, pay bill, and hassles less.

=> The ordering of foods has been made quite simple as all the details of the customer can be obtained by simply keying in the menu book.

Chapter 2

Project Development

Instruction:

We have used some Assembly Language functions in our project. These are

DB - stays for Define Byte. can be any letter or digit combination, though it should start with a letter.

DW - stays for Define Word. can be any letter or digit combination, though it should start with a letter.

Stack - The stack segment register is usually used to store information about the memory segment that stores the call stack of currently executed program.

Mov - The MOV instruction is the most important command in the 8086 because it moves data from one location to another.

Proc - A procedure is a set of code that can be branched to and returned from in such a way that the code is as if it were inserted at the point from which it is branched to. The branch to procedure is referred to as the call, and the corresponding branch back is known as the return.

DS – Data segment register.

AX - This is the accumulator. It is of 16 bits and is divided into two 8-bit registers AH and AL to also perform 8-bit instructions.

DX – This is the data register. It is of 16 bits and is divided into two 8-bit registers DH and DL to also perform 8-bit instructions. It is used in multiplication and input/output port addressing.

Offset - The OFFSET operator returns the offset of a memory location

** 2.jali kabab        80/-
** 3.singara           5/-
** 4.samucha           5/-
**
*****
*****
enter your order: 2
quantity: 1
total price: 080/-
1.go back to main menu
2.exit
Enter your choice
```

Clicked 1 for go to main menu and clicked 5 for go to dessert menu. And dessert menu is open .

The screenshot shows a terminal window titled "emulator screen (80x25 chars)". The menu is displayed as follows:

```
4.snacks
5.dessert
6.drinks

***
*****
*****

Enter your choice 5

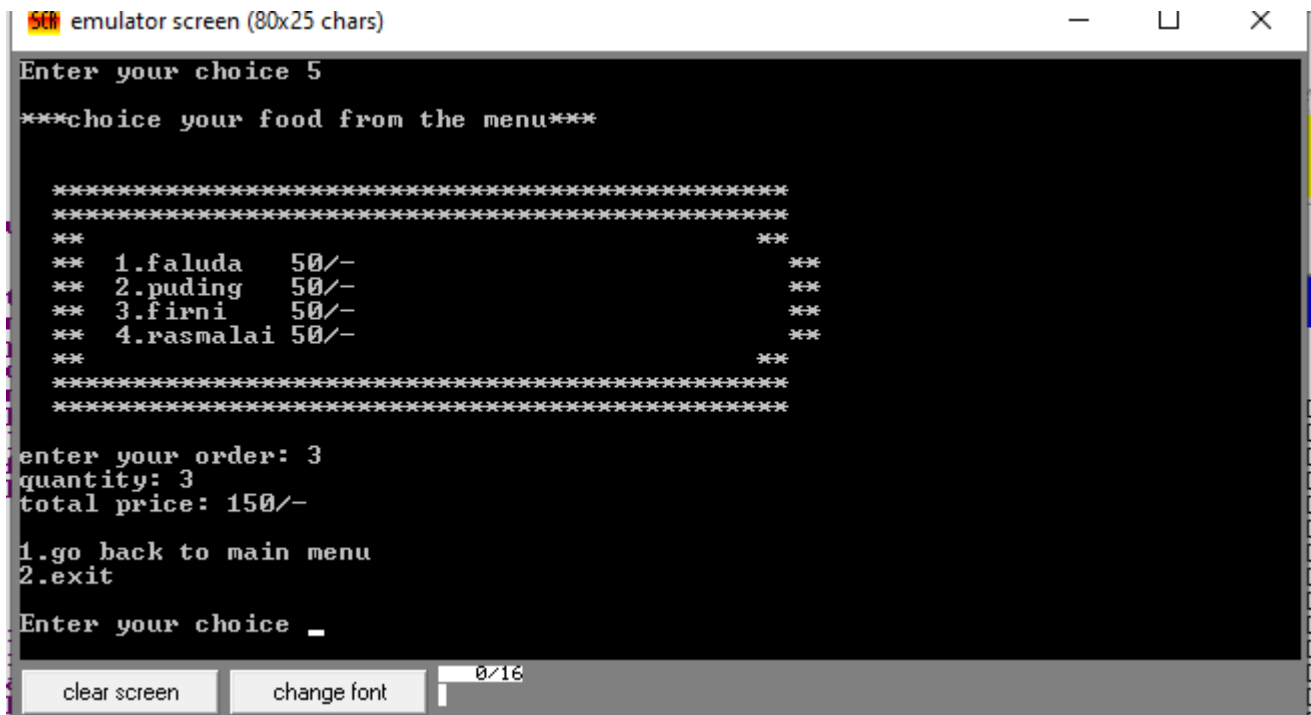

***choice your food from the menu***

*****
*****
**
** 1.faluda 50/-
** 2.puding 50/-
** 3.firni 50/-
** 4.rasmalai 50/-
**
*****
*****

enter your order:
```

At the bottom, there are buttons for "clear screen" and "change font", and a status bar showing "0/16".

We clicked 3 for “Firni” and Quantity =3 . Total price : 150/-

The screenshot shows the same terminal window after the user has made a selection. The output is as follows:

```
Enter your choice 5

***choice your food from the menu***

*****
*****
**
** 1.faluda 50/-
** 2.puding 50/-
** 3.firni 50/-
** 4.rasmalai 50/-
**
*****
*****

enter your order: 3
quantity: 3
total price: 150/-

1.go back to main menu
2.exit

Enter your choice _
```

The bottom of the screen shows the same "clear screen" and "change font" buttons, and the status bar now shows "0/16".

Clicked 1 for go to main menu and clicked 6 for go to drinks menu. And drinks menu is open .

The screenshot shows a Windows-style window titled "emulator screen (80x25 chars)". The main area has a black background with white text. At the top, it says "6.drinks". Below this, there are two rows of asterisks separating sections. Then, it prompts "Enter your choice 6". This is followed by another section separator of asterisks and the prompt "***choice your food from the menu***". Below this is a list of six items, each preceded by "**":
1.soft drinks 8/-
2.lemon juice 6/-
3.borhani 9/-
4.coffee 9/-
5.lemon tea 7/-
6.tea 5/-
Each item is flanked by two asterisks. After the list, there are two more rows of asterisks. Finally, it prompts "enter your order:". At the bottom of the window, there is a grey bar containing three elements: a button labeled "clear screen", a button labeled "change font", and a small status indicator showing "0/16".

We clicked 5 for “Lemon Tea” and Quantity=1 . Total price : 07/-

```
emulator screen (80x25 chars)

***choice your food from the menu***

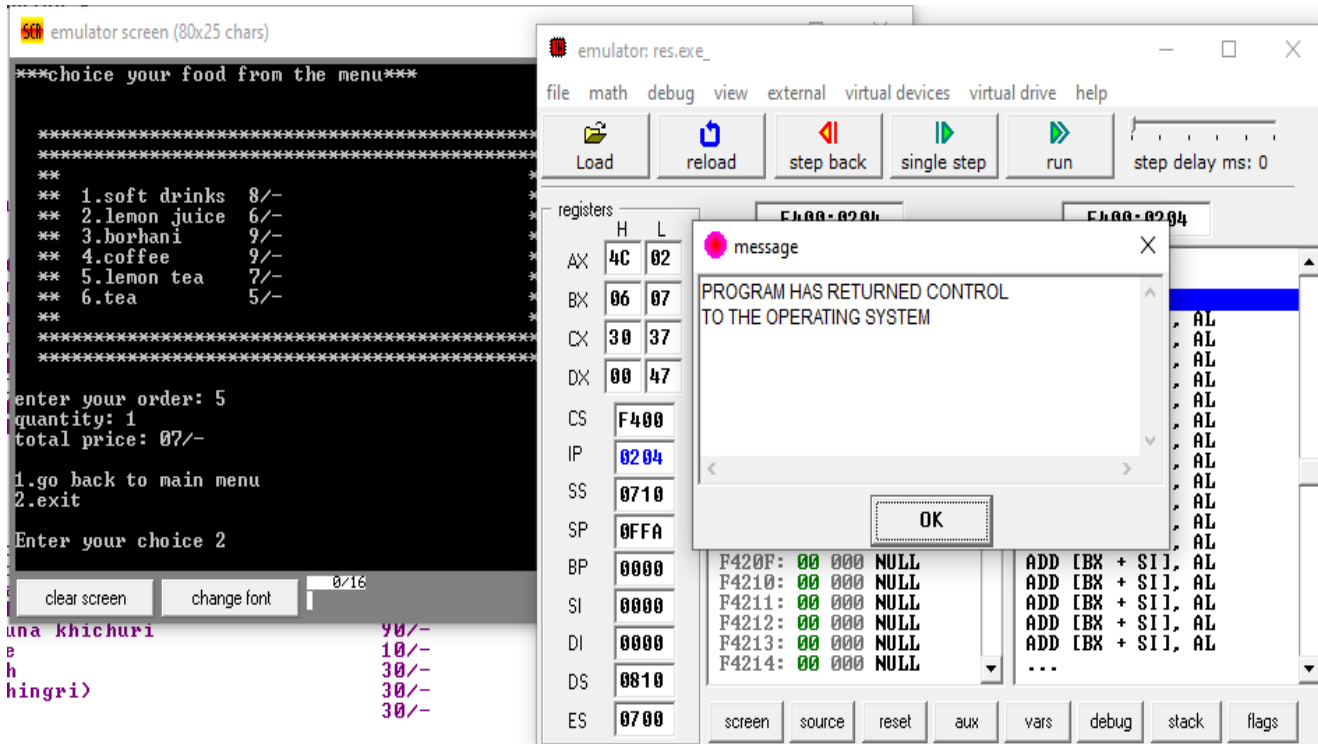

*****
*****
**                                     **
**  1.soft drinks   8/-             **
**  2.lemon juice    6/-             **
**  3.borhani        9/-             **
**  4.coffee         9/-             **
**  5.lemon tea      7/-             **
**  6.tea           5/-             **
**                                     **
*****
*****

enter your order: 5
quantity: 1
total price: 07/-

1.go back to main menu
2.exit

Enter your choice _ 1
```

Finally Clicked '2' for go to exit.

Chapter 3

Conclusion

Scope of Future Work:

We also want to modify our application for the Future Work .We hope this work will help us in our future work. The application to be developed deals with creating a Restaurant Management System which will automate the major restaurant operations such as generating COD, billing and keeping track of records of daily transaction.

Required software:

For using this project, we need to maintain a software requirement which is given below

- a) Emu 8086
- b) Operating System

Hardware:

In hardware requirements we require all those components which will provide us the platform for the development of the project. The minimum hardware required for the development of this project is as follows—

Ram minimum 2 GB
Hard disk—minimum 250 GB
Processor- Pentium 1 and Above

Results and Discussions

The purpose of our project is to make a restaurant management system . We have able to complete our target. First of all we had faced many problems while completing this project . Although it was difficult at first ,later we have able to complete our project correctly. We have learned a lot from this project and have worked with great pleasure.
